Profile

Computer Science and Engineering student nearing graduation, with hands-on experience in full-stack web development through internship and personal projects. Alongside my studies, I have worked continuously, learning how to balance professional responsibilities with technical growth. I am currently expanding my cybersecurity knowledge through self-study and hands-on labs. Seeking an entry-level software development role where I can contribute to real projects, learn from experienced developers, and grow within a professional team.

Education

Integrated Master, Computer Science and Engineering

Oct 2016 - Present
